H To arm/disarm BED EXIT system (regular/manual setting)

① To arm BED EXIT

Patient must be in bed to arm bed exit system.
From HOME SCREEN
   Press "ARM" **H**
   Press "YES" (To arm bed exit)
Verify that foot end bumper side view lights (optional) are illuminated green. When they are, bed exit system is "ARMED".

② To disarm BED EXIT (if alarm is triggered)
Press "DISARM" (on HOME SCREEN). This will turn off the system. Patient must be placed back in bed and system must be manually rearmed.

I To change BED EXIT detection level

Bed alarm must be off to make changes.

To change or set DETECTION LEVEL
From the HOME SCREEN, Press **Patient Risk Mgmt**
   Press **Select**
Press **→** to scroll through detection level options and press "Select detection" to select desired level.

H To arm/disarm BED EXIT system (AUTO Arm)   [Auto Arm]

When Auto Arm is activated and patient is detected in the bed, the bed exit is armed automatically.
To disarm BED EXIT (if alarm is triggered) :
   Press "DISARM" (which will appear on the HOME SCREEN). This will turn off the alarm.
If patient is out of bed :
   The system will return to stand-by mode.
If patient is still in bed :
   The system will apply a 1-minute care PAUSE to allow the caregiver to attend to the patient. If after 1 minute the patient is still in bed, the system will automatically initiate arming procedure.

J To ZERO the SCALE

From HOME SCREEN
Press "SCALE" button
Press **→** (Press once to scroll to zero)
Press **Select** to zero

Press "START" to confirm
IMPORTANT : Patient must not be on bed during procedure.
