Rental Solutions Delivered by

1 800 STRYKER Option 3

Universal | Hospital | Services®

Overall aesthetic that allows the patient the dignity of a standard hospital bed look

BackSmart™ expansion with color-coded levers allow the bed to easily expand and retract to accommodate patients of all sizes

Centrally-located fifth wheel adds an additional pivot point, improving maneuverability and steering

Patient helper provides a BackSmart solution for patient repositioning

True 1000 lb. weight capacity

Large Capacity Patient Care

A practical solution for better patient care and comfort for all patients. Bari 10A can be used as a standard hospital bed, but can easily expand to accommodate your heaviest patients. Best-in-class expansion and retraction with color-coded levers expands 6 inches on each side. Centrally located fifth wheel improves maneuverability and steering.

Best-in-class expansion/retraction with color-coded levers.

Made with heavy-gauge, tubular steel, the Bariatric Patient Helper adds to patient dignity by allowing the patient to lift the upper body with arm strength.

A center-mounted fifth wheel provides an additional pivot point to turn the bed in a tighter arc. The fifth wheel retracts to clear the under-bed space.
